

Things that work (i believe so...)

- Positional lights
- Attenuation
- Shadows
- All objects: cylinderZ, cylinderY, closedConeY, plane (not transparent), sphere
- Reflections
- Resizing
- Anti-aliasing
- Textures

Things that don't work:

- Spotlight: although I've checked with the professor about the code, I still can't seem to run it.

Screenshots:

1. AA off → AA on

– aa off

– aa on

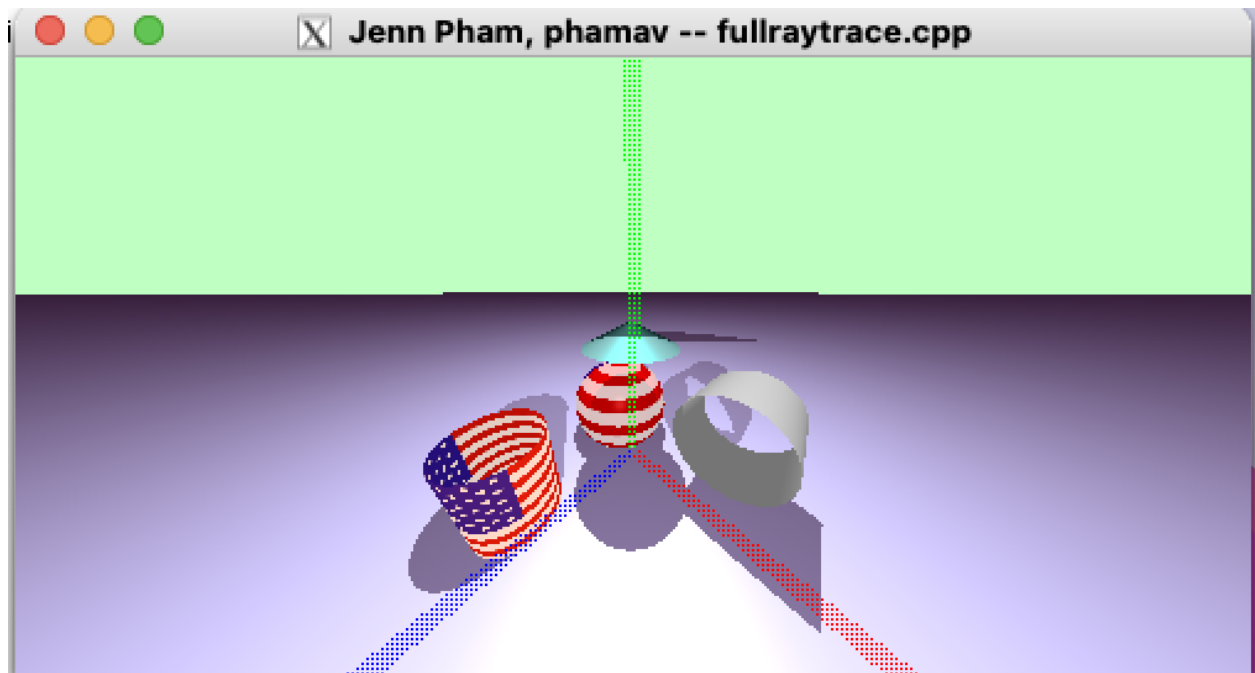

2. Only positional light (right in front of the camera) → Only spotlight (on top of the y axis)
  - poslight

- spotlight (doesn't work)

3. Image on the cylinder

4. Reflection 1 times
